

# INSTALLATION GUIDE CONVEX

## Follow these steps:

### Wall Installation

1. Each Convex panel comes with a keyhole hanger placed in the top center of the back panel. The hanger is embedded into the wood for a seamless wall mounting.
2. The provided screws and wall plugs can be used with most walls and do not require any special preparation.
3. T-Nut + Eyebolt included for ceiling mount, pre-installed.

### Not included:

Suspension kit / wire for hanging from the ceiling.

\*We do not add any suspension kit or wire, as the needed system is dependent on the ceiling type and project.

### Included:

4 x T-Nuts pre-drilled & installed in the back of the panel, 1 x in each corner.

4 x Eyebolts (Size M6 /6mm diameter bolt) to screw into the T-nuts.

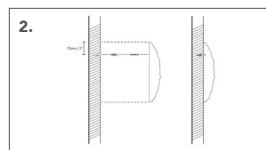

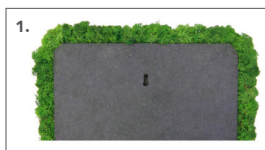

\*The height of the eyebolt can be adjusted ca. 1 inch by screwing the bolt more in or out.

For the wire, Nordgrona recommend a gauge that is sufficient to hold the weight of the heaviest panel. A 60cm Convex Square can weigh 10-13kg. Although the panel will be held by 4 bolts, Nordgrona recommend that 1 wire should be able to hold the entire weight.

The eye bolts create a hook system, which allows for multiple hanging options.

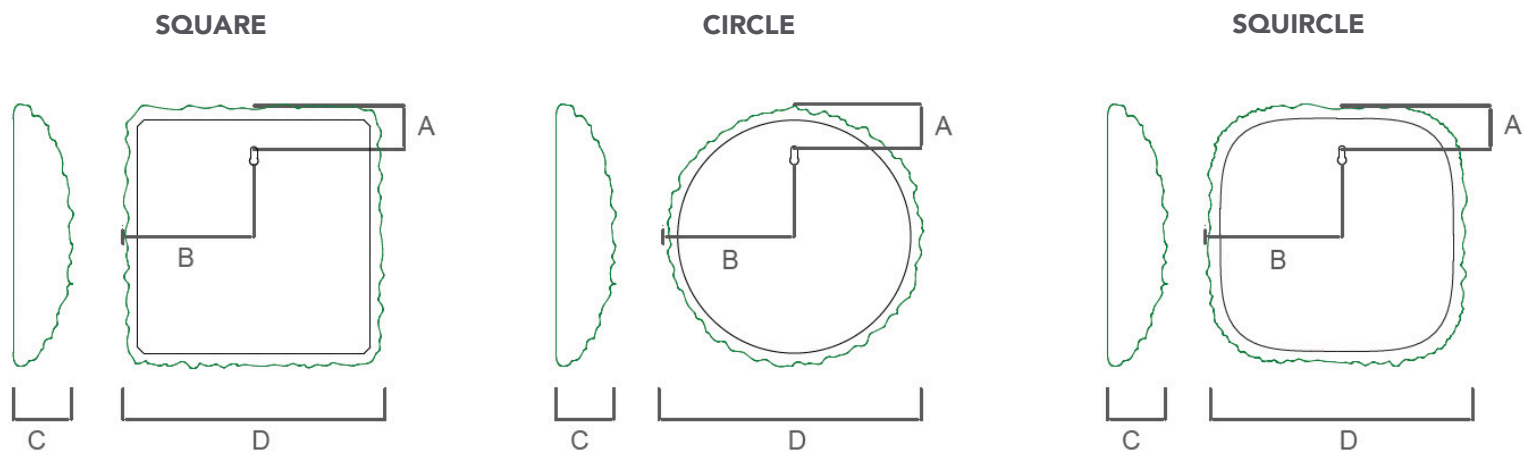

4. The panels can be mounted to metal grids, or suspended from the ceiling with wires / hooks. Other options include using clutches for height adjustment, or carribenas for easy connection.
